1 **Vehicle-feasible baseline**

Availability, energy demand, charging limits

2 **Balanced-model target schedule**

Precomputed vehicle-level V1G schedule

3 **Proportional schedule scaling**

$$u_{i,t}(\alpha) = u^{0}_{i,t} + \alpha(u^{B}_{i,t} - u^{0}_{i,t}),\ 0 \le \alpha \le 1$$

4 **Unbalanced three-phase power flow**

Voltage, VUF, equipment loading

5 **Verified schedule implementation**

Largest verified feasible α;
first limiting constraint
